🧠 THE MEGA-PROMPT: Personal Portfolio Website — Complete Build Specification

> **Purpose:** Build a next-generation personal portfolio website for a student/aspiring AI Product Manager that serves as a living, breathing digital identity — not just a resume, but a window into how you think, build, and see the world.

> **Target Audience:** AI/PM hiring managers, recruiters, fellow builders, collaborators, and the curious internet.

> **Tone:** Intellectually confident, creatively bold, warm but sharp. Think: "a founder's brain meets a designer's eye meets a philosopher's soul."

1. DESIGN PHILOSOPHY & PRINCIPLES

Core Identity

This is NOT a template portfolio. This is an **opinionated digital space** — a personal OS that reflects how you operate. Every pixel should feel intentional. Every interaction should reveal something about who you are.

Design Principles

1. **"Show the Thinking, Not Just the Output"** — The portfolio should expose your process, your evolving thoughts, your half-formed ideas. This is what separates it from every other portfolio.
2. **Controlled Chaos** — The site should feel alive, almost organic, but never messy. Think: a beautifully organized desk with one surprising object on it.
3. **Depth on Demand** — Surface layer is clean and scannable. But every section rewards curiosity with deeper layers of content, interactions, and hidden details.
4. **Time-Aware Design** — The site acknowledges that visitors have different amounts of time. It respects the 30-second scanner AND the 15-minute deep-diver.
5. **Confidence Without Arrogance** — The design should feel bold, assured, and opinionated without trying too hard. No excessive gradients, no gratuitous animations. Every element earns its place.

Design References & Mood

- The editorial precision of **Stripe's website**
- The playful depth of **Linear's landing page**
- The personality of **Paco Coursey's portfolio** (paco.me)
- The intellectual energy of **Andy Matuschak's notes**
- The warmth of a well-curated Notion workspace
- The boldness of **Vercel's design language**

---

2. TECH STACK

Core Framework

```
Framework:        Next.js 14+ (App Router)
Language:         TypeScript (strict mode)
Styling:          Tailwind CSS + CSS Modules (for complex animations)
Animation:        Framer Motion (primary) + GSAP (for scroll-driven & complex
```

```
sequences)
3D:                Three.js + React Three Fiber + Drei
State Management: Zustand (lightweight global state)
CMS/Content:       MDX (for blogs, thoughts, case studies) + Contentlayer or Velite
AI Integration:    Anthropic Claude API (via serverless functions)
```

Supporting Libraries

```
Lenis:               Smooth scroll
Shiki:               Code syntax highlighting (for The Lab section)
next-mdx-remote:     MDX rendering
date-fns:            Date formatting
Lucide React:        Icon system
Rehype/Remark:       MDX plugins (TOC, slug, code titles)
next-themes:         Dark/light mode
Embla Carousel:      Carousels (if needed)
React-Force-Graph:   AI Connections Map (knowledge graph)
```

Infrastructure

```
Hosting:           Vercel (optimized for Next.js)
Domain:            Custom domain (yourname.dev or yourname.com)
Analytics:         Vercel Analytics + Plausible (privacy-friendly)
Database:          Supabase or PlanetScale (for dynamic features: guestbook, live
data)
API Routes:        Next.js API routes / Vercel Edge Functions
Image CDN:         Vercel Image Optimization + Cloudinary (for aesthetic photos)
Font Hosting:      Self-hosted via next/font (performance)
```

Why This Stack

- **Next.js** = SSR/SSG for SEO + blazing performance + API routes for AI features
- **Tailwind** = rapid iteration, consistent spacing, responsive-first
- **Framer Motion** = declarative animations that play well with React
- **Three.js/R3F** = 3D hero without leaving the React ecosystem
- **MDX** = write content in Markdown, embed React components seamlessly
- **Supabase** = real-time DB for dynamic features without backend overhead

---

3. TYPOGRAPHY SYSTEM

Philosophy

Typography is the skeleton of this portfolio. It should feel **editorial** — like a well-designed magazine that also happens to be a website.

Font Pairing

Option A (Recommended): Modern Editorial

```
Headings:    "Cabinet Grotesk" or "Satoshi" (geometric, bold, modern)
Body:        "Inter" or "General Sans" (clean, highly readable)
Mono/Code:   "JetBrains Mono" or "Berkeley Mono" (for code, The Lab, terminal
mode)
Accent:      "Instrument Serif" (for quotes, highlighted text, editorial moments)
```

Option B: Premium Minimal

```
Headings:    "Clash Display" (bold, statement-making)
Body:        "Switzer" (neutral, Swiss-inspired)
Mono/Code:   "Fira Code" (ligatures for code blocks)
Accent:      "Newsreader" (serif for contrast moments)
```

Type Scale (Desktop)

```
Display / Hero:       72-96px  |  font-weight: 700  |  line-height: 1.0-1.05
H1 (Section Title):   48-56px  |  font-weight: 700  |  line-height: 1.1
H2 (Subsection):      32-36px  |  font-weight: 600  |  line-height: 1.2
H3 (Card Title):      24-28px  |  font-weight: 600  |  line-height: 1.3
Body Large:           18-20px  |  font-weight: 400  |  line-height: 1.6
Body:                 16px     |  font-weight: 400  |  line-height: 1.7
Small / Caption:      13-14px  |  font-weight: 400  |  line-height: 1.5
Mono / Code:          14-15px  |  font-weight: 400  |  line-height: 1.6
```

Type Rules

- **Letter-spacing:** Headings should have slight negative tracking (-0.02em to -0.04em) for tightness. Body stays at 0.
- **Max line length:** Body text MUST NOT exceed 680px width (about 65-75 characters per line). This is non-negotiable for readability.
- **Paragraph spacing:** Use 1.5em margin-bottom between paragraphs. Never use `<br>` for spacing.
- **Heading hierarchy:** Never skip heading levels. H1 → H2 → H3. One H1 per page.
- **Emphasis:** Use `font-weight: 500` (medium) for inline emphasis instead of bold where possible. Reserve bold (700) for headings. Use the accent serif font for pull quotes.

- **All-caps:** Use VERY sparingly — only for small labels, tags, or section eyebrows. Always with increased letter-spacing (+0.05em to +0.1em).

---

4. COLOR SYSTEM & THEMING

Dark Mode (Primary — Default)

The site opens in dark mode. This is a deliberate choice — it feels more premium, cinematic, and developer-aligned.

```css
/* Background Layers */
--bg-primary:       #0A0A0B       /* Deep near-black (main background) */
--bg-secondary:     #111113       /* Slightly lifted (cards, sections) */
--bg-tertiary:      #1A1A1E       /* Elevated surfaces (modals, dropdowns) */
--bg-hover:         #222228       /* Hover states on cards */

/* Text */
--text-primary:     #FAFAFA       /* Primary text — almost white, not pure white */
--text-secondary:   #A1A1AA       /* Secondary/muted text */
--text-tertiary:    #71717A       /* Disabled, placeholder text */

/* Accent Colors */
--accent-primary:   #E8C547       /* ⭐ SIGNATURE YELLOW — used for highlights, achi
--accent-secondary: #3B82F6       /* Blue — links, interactive elements */
--accent-green:     #22C55E       /* Status: available, success states */
--accent-red:       #EF4444       /* Alerts, important badges */
--accent-purple:    #A855F7       /* AI-related features, special tags */

/* Borders & Dividers */
--border-subtle:    #222228       /* Subtle dividers */
--border-default:   #2E2E35       /* Default borders */
--border-hover:     #3F3F48       /* Hover borders */

/* Special */
--glow-yellow:      rgba(232, 197, 71, 0.15)   /* Yellow glow for achievement boxes
--glow-blue:        rgba(59, 130, 246, 0.10)    /* Blue glow for AI features */
--glass:            rgba(255, 255, 255, 0.03)   /* Glass-morphism background */
--glass-border:     rgba(255, 255, 255, 0.06)   /* Glass-morphism border */
```

Light Mode (Secondary)

```css
```

```
--bg-primary:       #FAFAF9
--bg-secondary:     #F5F5F4
--bg-tertiary:      #FFFFFF
--text-primary:     #0A0A0B
--text-secondary:   #52525B
--accent-primary:   #CA9A04       /* Slightly deeper yellow for light mode contrast
```

Color Rules

- **Signature Yellow (#E8C547):** This is YOUR color. It's used for the "Recent Achievement" highlight box, active nav indicators, key CTAs, and any moment you want to draw the eye. Use it with restraint so it always feels special.
- **Never use pure white (#FFFFFF) as text on dark backgrounds.** Use `#FAFAFA` — it's softer on the eyes.
- **Never use pure black (#000000) as background.** Use `#0A0A0B` — it has subtle warmth.
- **Gradients:** Use sparingly. When used, prefer subtle dark-to-slightly-less-dark gradients. No rainbow gradients. If using color gradients, stick to 2-color max (e.g., yellow → amber, blue → purple).
- **Glass-morphism:** Use for floating elements only (nav bar, modals, tooltips). Always with backdrop-blur and a subtle border.

Dark/Light Toggle

- Animated toggle in the navigation — use a sun/moon icon with a smooth morph transition
- Persist preference in localStorage
- Transition: all color changes should animate over 300ms with ease-in-out

---

5. LAYOUT SYSTEM & GRID

Container

```css
Max-width:        1280px (main content)
Wide:             1440px (hero, full-bleed sections)
Narrow:           768px (blog posts, long-form reading)
Padding (desktop): 0 64px
Padding (tablet):  0 40px
Padding (mobile):  0 20px
```

Grid System

```
Primary:   12-column grid, 24px gap (desktop)
           8-column grid, 20px gap (tablet)
           4-column grid, 16px gap (mobile)
```

Spacing Scale (based on 4px unit)

```
4px   (xs)     — tight padding, icon gaps
8px   (sm)     — compact spacing
16px  (md)     — standard padding inside cards
24px  (lg)     — gap between related elements
32px  (xl)     — gap between cards in a grid
48px  (2xl)    — gap between sub-sections
64px  (3xl)    — gap between major content blocks
96px  (4xl)    — gap between top-level sections
128px (5xl)    — hero section vertical padding
```

Section Layout Pattern

Every major section follows this structure:

```
[96px top padding]
[Section Eyebrow — small, uppercase, accent color, mono font]
[Section Title — H1/H2, bold, tight line-height]
[Section Description — 1-2 lines, muted text, max 560px wide]
[48px gap]
[Section Content — grid/cards/list]
[96px bottom padding]
```

Card Design

```
Background:       var(--bg-secondary)
Border:           1px solid var(--border-subtle)
Border-radius:    12px (standard) | 16px (large feature cards)
Padding:          24px (standard) | 32px (large)
Hover:            border-color transitions to var(--border-hover),
                  subtle translateY(-2px),
                  background shifts to var(--bg-hover)
Transition:       all 200ms ease
```

---

6. MOTION & ANIMATION SYSTEM

Principles

1. **Motion should feel like breathing** — organic, smooth, never jarring
2. **Every animation must have a purpose** — either guiding attention, providing feedback, or revealing information
3. **Performance first** — prefer CSS transforms and opacity. Never animate layout properties (width, height, top, left)
4. **Respect reduced-motion preferences** — wrap all animations in `prefers-reduced-motion` checks

Standard Easing Curves

```css
--ease-out:       cubic-bezier(0.22, 1, 0.36, 1)     /* Primary — entering elements
--ease-in-out:    cubic-bezier(0.65, 0, 0.35, 1)     /* Transitions, toggles */
--ease-spring:    cubic-bezier(0.34, 1.56, 0.64, 1)  /* Playful bounces (buttons, ea
--ease-smooth:    cubic-bezier(0.25, 0.1, 0.25, 1)   /* Subtle, barely-there animati
```

Entrance Animations (Scroll-triggered)

```
Fade Up:          opacity 0→1, translateY(20px→0), duration: 600ms, ease-out
Fade In:          opacity 0→1, duration: 400ms, ease-smooth
Stagger:          Children animate with 80-100ms delay between each
Scale In:         opacity 0→1, scale(0.95→1), duration: 500ms, ease-out
Slide In Left:    opacity 0→1, translateX(-30px→0), duration: 600ms, ease-out
```

Interaction Animations

```
Button Hover:     scale(1.02), shadow increase, 150ms
Card Hover:       translateY(-2px), border-color change, 200ms
Link Hover:       underline slides in from left, 200ms
Nav Item:         background-color fade, 150ms
Toggle:           width morph with spring easing, 300ms
```

Page Transitions

- Use Framer Motion `AnimatePresence` for route transitions
- Pattern: current page fades out (200ms) → new page fades up (400ms)
- Keep it subtle — no flashy page flips or slides

Scroll Animations (GSAP ScrollTrigger)

- Hero section: parallax on background elements, text reveals on scroll
- Section titles: clip-path reveal or character-by-character animation
- Progress indicator: reading progress bar at the top of blog posts
- Horizontal scroll: for the "Content I Like" or gallery sections

Loading States

- Skeleton screens (not spinners) for all async content
- Pulse animation on skeleton elements: opacity 0.3→0.7, 1.5s infinite
- Content should fade in once loaded

---

7. 3D & HERO SECTION

Hero Section — The First Impression

Concept: The hero is a full-viewport cinematic experience. It features a 3D abstract generative art piece (not a generic globe or particles) that responds to mouse movement. The 3D element represents your "neural landscape" — an abstract topographical mesh or interconnected node system that feels alive.

Layout:

```
┌──────────────────────────────────────────────────────────┐
│  [Nav — floating, glass-morphism, fixed top]             │
│                                                          │
│                                                          │
│     [3D Canvas — full background, subtle]                │
│                                                          │
│          [Your Name — Display size, bold]                │
│          [One-liner tagline — Body Large, muted]         │
│          [Status Badge: "Building @ [current]"]          │
│                                                          │
│          [CTA Buttons: "See My Work" | "Read My Mind"]   │
│                                                          │
│                                                          │
│     [Scroll indicator — animated down arrow]             │
│                                                          │
└──────────────────────────────────────────────────────────┘
```

3D Specifications:

```
Engine:           React Three Fiber + Drei
Geometry:         Abstract mesh — either:
                  (a) Morphing topographical landscape (like terrain that
breathes)
                  (b) Interconnected particle network (nodes + edges, organic
movement)
                  (c) Flowing ribbon/wave geometry (like silk in wind)
Interaction:      Follows mouse position with dampened easing (lerp factor: 0.05)
                  Subtle rotation on X/Y axis based on cursor
                  Slight parallax depth on scroll
Color:            Monochrome base (dark grays) with accent color highlights
                  Subtle emissive glow on nodes/edges using --accent-primary
Lighting:         Single directional light + ambient light
                  Subtle bloom post-processing (threshold: 0.8, intensity: 0.3)
Performance:      Target 60fps. Use instanced meshes for particles.
                  Reduce geometry on mobile. Fallback to 2D gradient on low-end
devices.
                  Lazy-load the 3D canvas (don't block initial paint).
                  Use <Suspense> with a gradient placeholder.
```

Text Overlay on 3D:

- Name: enters with a staggered character animation (each letter fades up with 30ms delay)
- Tagline: fades in 400ms after name completes
- Status badge: slides in from left, 200ms after tagline
- CTAs: fade up together, 200ms after status

Scroll Behavior:

- On scroll down, the 3D scene parallaxes backward (scale down + translateZ)
- Text fades out at 30% scroll
- 3D canvas opacity reduces to 0 by 60% scroll
- Transition into the next section should feel seamless

---

8. NAVIGATION & INFORMATION ARCHITECTURE

Primary Navigation (Fixed, Top)

```
┌──────────────────────────────────────────────────────────────┐
|  [Logo/Name]     [Work] [Mind] [Lab] [About] [Resume]   [☾]  |
```

Design:

- Glass-morphism background: `backdrop-blur: 12px`, `bg: var(--glass)`, `border-bottom: 1px solid var(--glass-border)`
- Appears after scrolling past hero (initially hidden to not obstruct the 3D experience)
- Active section indicated by **signature yellow** underline or dot
- Dark/light toggle (☾/☀) on far right
- On mobile: hamburger menu → full-screen overlay with staggered link animations

Navigation Groups

The portfolio is organized into **3 conceptual zones**, which map to the nav:

WORK (Professional Identity)

- Projects (with Case Studies)
- Skills, Tools, Coding Languages
- Education
- Resume (AI-Annotated)
- Recent Achievement
- Currently Building / Changelog

MIND (Intellectual Identity)

- The Lab (Experimental Ideas)
- Shower Thoughts / Hot Takes
- Things I've Changed My Mind About
- Principles / Personal Manifesto
- Product Philosophy
- Reading List / Bookshelf
- Thought Leadership Wall
- How I'd Solve It (PM Challenge)
- Live Sentiment Journal

ABOUT (Personal Identity)

- Who Am I (intro, location, Spotify)
- Contact (name, email, LinkedIn, Instagram)

- Fun Facts
- Content I Like (sneak peek)
- Aesthetic Photo Gallery
- Predict My Next Move
- Letters to My Future Self
- The Moodboard
- What I'm Consuming (live feed)
- Unpopular Opinions
- My Decision Framework
- Spotify Playlist Embed

PROOF OF WORK (Credibility Layer)

- Metrics & Impact Dashboard
- Open Source / Community Contributions
- QR Code for Resume

Page Structure

The homepage is a **long-scroll single page** with all sections, but each major section also has its own dedicated route for deep-linking:

```
/                    → Homepage (all sections, condensed)
/projects            → Full projects grid + case studies
/projects/[slug]     → Individual case study
/mind                → All "Mind" content (Lab, Thoughts, etc.)
/lab                 → The Lab (full view)
/thoughts            → Shower Thoughts archive
/about               → Full about page
/resume              → AI-Annotated Resume
/bookshelf           → Full reading list
/changelog           → Currently Building log
/letters             → Letters to My Future Self
/moodboard           → The Moodboard
/unpopular           → Unpopular Opinions
/impact              → Metrics & Impact Dashboard
/contributions       → Open Source & Community
/secret              → 🥚 Hidden page
```

---

9. SECTION-BY-SECTION SPECIFICATION

9.1 — WHO AM I (Quick Intro Card)

Purpose: Instant context. Who is this person? Where are they? What vibe do they give off?

Layout: A compact, visually rich card or bento-grid section right after the hero.

```
┌──────────────────────────────────────────────────┐
│                                                  │
│  ┌──────────────┐  ┌──────────────────────────┐  │
│  │              │  │                          │  │
│  │  [Profile    │  │  [Name] — [Title/Role]   │  │
│  │   Photo]     │  │  📍 Mumbai, India        │  │
│  │              │  │  🟢 Available for opportunities │
│  │              │  │                          │  │
│  │              │  │  [2-3 line micro-intro]  │  │
│  └──────────────┘  │                          │  │
│                    │  🎧 Currently listening: [Spotify] │
│  ┌──────┐ ┌────┐  │                          │  │
│  │Email │ │In  │  │  [Quick links: GitHub, LinkedIn,  │
│  └──────┘ └────┘  │   Instagram, Twitter/X]  │  │
│                    └──────────────────────────┘  │
└──────────────────────────────────────────────────┘
```

Specs:

- Profile photo: rounded rectangle (border-radius: 16px), subtle border, hover → slight scale + glow
- Spotify integration: Use Spotify API (spotify-web-api-node) to show currently playing or last played track. Display as a small pill with album art + song name + artist, with a subtle playing animation (bouncing bars)
- Status badge: green dot + "Available for opportunities" (or customizable status). Pulsing green dot animation
- Location: show with a subtle animated pin icon
- Social links: icon-only row, hover → scale + color fill transition
- Micro-intro: 2-3 sentences max. Punchy. Not a bio — a vibe check.
- The entire card should feel like a "digital business card"

9.2 — ABOUT ME (Deeper Story)

Purpose: The full story. Who you are, where you come from, what drives you.

Layout:

```
┌──────────────────────────────────────────┐
│  [Eyebrow: ABOUT]                        │
│  [Title: "The Person Behind the Pixels"] │

│  │              │  │                  │  │
│  │  [Large      │  │  [About text –   │  │
│  │   aesthetic  │  │   3-4 paragraphs,│  │
│  │   photo of   │  │   warm, personal,│  │
│  │   you]       │  │   story-driven]  │  │
│  │              │  │                  │  │
│  │              │  │  [Fun Facts grid │  │
│  └──────────────┘  │   below the text]│  │
│                    └──────────────────┘  │
└──────────────────────────────────────────┘
```

Content Guidelines:

- Don't write a LinkedIn summary. Write like you're telling a friend your story over coffee.
- Structure: Origin → Turning point → What excites you now → What's next
- Weave in personality — humor, quirks, passions outside tech
- End with a forward-looking statement (ties into "Predict My Next Move")

Fun Facts:

- Display as a grid of small cards (3 columns on desktop)
- Each card: emoji/icon + one-liner fact
- Examples: "☕ Runs on 4 cups of chai/day" | "🧠 Thinks in product frameworks" | "🌍 Believes AI should be for everyone"
- Hover: card flips or lifts with subtle shadow

9.3 — RECENT ACHIEVEMENT (Signature Yellow Highlight Box)

Purpose: Immediately catch the eye with your latest win. Always up-to-date.

Design:

```
┌──────────────────────────────────────────────────┐
│  ⚡ LATEST ACHIEVEMENT                            │
│                                                  │
│  [Achievement Title — Bold, Large]               │
│  [1-2 line description]                          │
│  [Date]                                    [→]   │
│                                                  │
└──────────────────────────────────────────────────┘
```

Styling:

```css
background: var(--glow-yellow);
border: 1px solid rgba(232, 197, 71, 0.3);
border-left: 4px solid var(--accent-primary);  /* Bold yellow left border */
border-radius: 12px;
padding: 24px 32px;
```

- The yellow glow should be subtle but unmistakable — this box is THE thing that catches the eye
- Position: near the top of the page, right after "Who Am I" or integrated into the bento grid
- Should be updatable via CMS/MDX (so you can change it easily)
- Subtle pulse animation on the ⚡ icon
- On hover: box shadow intensifies, slight translateY lift

9.4 — PROJECTS & CASE STUDIES

Purpose: Showcase your work with depth. This is the portfolio's portfolio.

Homepage View: A curated grid of 4-6 featured projects

Layout (Homepage):

```
┌──────────────────────────────┐ ┌──────────────────────────────┐
│  [Project Thumbnail/Screenshot]  │ │  [Project Thumbnail/Screenshot]  │
│                              │ │                              │
│  [Project Name]              │ │  [Project Name]              │
│  [One-liner description]     │ │  [One-liner description]     │
│  [Tags: AI, Product, Python] │ │  [Tags: Web3, Design, React] │
│  [Year]                [→]   │ │  [Year]                [→]   │
└──────────────────────────────┘ └──────────────────────────────┘
```

Individual Case Study Page (`/projects/[slug]`):

```
Structure:
├── Hero Image/Video (full-width)
├── Project Meta (role, timeline, team, tools)
├── The Problem (what needed solving)
├── My Approach (how you thought about it — PM-style)
├── The Process (key decisions, pivots, frameworks used)
├── The Solution (what you built, with screenshots/demos)
├── Impact & Results (metrics, outcomes, learnings)
├── Reflections (what you'd do differently)
└── Related Projects (AI-recommended connections)
```

Design Specs:

- Project cards: 2-column grid (desktop), 1-column (mobile)
- Thumbnail: 16:9 ratio, border-radius: 12px, subtle hover zoom (scale 1.03)
- Tags: small pills, monospace font, muted colors, color-coded by category
- Case study pages: narrow container (768px) for readability, editorial layout
- Include actual screenshots, diagrams, and metrics — no fluff
- "View Live" and "View Code" buttons where applicable

9.5 — CURRENTLY BUILDING / CHANGELOG

Purpose: Show you're always building. A living, breathing work log.

Design: Vertical timeline format, newest at top.

```
┌──────────────────────────────────┐
│  🔨 CURRENTLY BUILDING           │
│                                  │
│  ● [Today]                       │
│  │  "Working on portfolio's 3D hero │
│  │   section. Experimenting with  │
│  │   topographical mesh generation." │
│  │  [Tags: Three.js, Creative Coding] │
│  │                               │
│  ● [3 days ago]                  │
│  │  "Shipped v1 of the AI Product │
│  │   Analyzer. 200 users in first week." │
│  │  [Tags: AI, Product, Launch]  │
│  │                               │
│  ● [1 week ago]                  │
│  │  "Deep dive into RAG architectures. │
│  │   Notes in The Lab."          │
│  │  [Link to Lab entry]          │
│                                  │
│  [View Full Changelog →]         │
└──────────────────────────────────┘
```

Specs:

- Timeline line: 2px solid var(--border-subtle)
- Active dot (today): pulsing green dot
- Past dots: solid gray
- Entries: written in first person, casual tone
- Show 3-5 entries on homepage, full archive on /changelog
- Each entry can link to a project, Lab entry, or external resource

---

9.6 — SKILLS, TOOLS & CODING LANGUAGES

Purpose: Quick scannable proof of technical competence.

Layout: Bento-grid or 3-column layout, each with its own card.

```
┌──────────────────────┐ ┌──────────────────────┐ ┌──────────────────────┐
│ SKILLS               │ │ TOOLS                │ │ LANGUAGES            │
│                      │ │                      │ │                      │
│ Product Strategy     │ │ Figma                │ │ Python ▰▰▰▰▰▰ 90%    │
│ User Research        │ │ Notion               │ │ JS/TS  ▰▰▰▰▱▱ 75%    │
│ Data Analysis        │ │ Jira                 │ │ SQL    ▰▰▰▰▱▱ 65%    │
│ AI/ML Concepts       │ │ VS Code              │ │ R      ▰▰▰▱▱▱ 50%    │
│ Wireframing          │ │ Tableau              │ │                      │
│ A/B Testing          │ │ Jupyter              │ │                      │
└──────────────────────┘ └──────────────────────┘ └──────────────────────┘
```

Design Options:

- **Option A (Minimal):** Simple lists with subtle icons. Clean and scannable.
- **Option B (Interactive):** Hover on a skill to see a tooltip with context ("Used in 4 projects, learning since 2022")
- **Option C (Visual):** Icon grid with proficiency indicators (bars, dots, or rings)
- **Recommended:** Option B — it adds depth without clutter
- Tools and skills should use actual brand icons/logos where possible (use Simple Icons or Devicon)
- Animate in with stagger on scroll (80ms between each)

9.7 — EDUCATION

Purpose: Academic background, concise.

Layout:

```
🎓 EDUCATION

  [University Name]                [Year Range]
  [Degree & Major]
  [Key coursework, honors, relevant details]
  [GPA if impressive, or skip]

  [Relevant Certifications / Online Courses]
  [DeepLearning.AI, Coursera, etc.]
```

- Keep it compact — 1-2 cards max
- University logo on the left (small, grayscale, color on hover)
- Certifications: grid of small badge-style cards

9.8 — RESUME (AI-Annotated — Director's Commentary)

Purpose: Your resume, but alive. Not a PDF embed — a reimagined interactive experience.

Concept: The resume is displayed as a clean, typographically beautiful page. But each bullet point has a small " 🧠 " icon. Hovering (or clicking) the icon reveals an AI-generated annotation — context, what you learned, why this matters, behind-the-scenes commentary. It's like listening to a director's commentary on your own career.

Layout:

```
📄 RESUME                                  [Download PDF ↓]

EXPERIENCE
──────────────────────────────────────────

[Role] @ [Company]                          [Date Range]

• Led product discovery for AI feature...          [🧠]

  ┌──────────────────────────────────────┐
  │ 🧠 "This was my first time owning the full  │
  │ discovery process. I learned that user      │
  │ interviews > surveys for early-stage ideas." │
  └──────────────────────────────────────┘

• Shipped recommendation engine, 30% ↑ engagement  [🧠]
• Conducted 25+ user interviews for roadmap input   [🧠]

[... more sections: Education, Skills, etc.]
```

Specs:

- Annotations: tooltip/popover style, background: var(--bg-tertiary), border: var(--accent-purple) (AI purple)
- Annotations are written by YOU (pre-authored), not generated live — this ensures quality and authenticity
- "Download PDF" button generates a clean, non-annotated PDF version
- On mobile: annotations appear as expandable accordions below each bullet
- The resume section should feel premium — generous whitespace, perfect typography

---

9.9 — THE LAB (Experimental Ideas Zone)

Purpose: The raw, unpolished workshop. Half-baked ideas, experiments, hypotheses. Shows you're always thinking.

Concept: Think of it as your public R&D department. Each entry is a "lab note" — an experiment, a thought, a code snippet, a hypothesis. Entries have statuses: 🧪 Experimenting | 💡 Hypothesis | 🔬 In Progress | ✅ Concluded | 💀 Failed

Layout:

```
┌──────────────────────────────────────────────────────────┐
│  🧪 THE LAB                                              │
│  "Where half-baked ideas come to cook"                   │
│                                                          │
│  [Filter: All | Experimenting | Hypothesis | Failed]     │
│                                                          │
│  ┌──────────────────────────────────────────────────┐    │
│  │  💡 Can RAG replace traditional product analytics?  │  │
│  │  Status: Hypothesis | Date: Mar 2026             │  │
│  │                                                  │  │
│  │  "I think retrieval-augmented generation could   │  │
│  │   fundamentally change how PMs interact with data.  │  │
│  │   Here's my thinking..."                         │  │
│  │                                                  │  │
│  │  [Tags: AI, RAG, Product Analytics]              │  │
│  │  [Read Full Note →]                              │  │
│  └──────────────────────────────────────────────────┘    │
│                                                          │
│  ┌──────────────────────────────────────────────────┐    │
│  │  💀 Building a GPT-powered PRD generator         │  │
│  │  Status: Failed | Date: Feb 2026                 │  │
│  │                                                  │  │
│  │  "Tried to build an AI that writes PRDs. Here's why  │  │
│  │   it didn't work and what I learned..."          │  │
│  │                                                  │  │
│  │  [Tags: AI, Product, Failed Experiment]          │  │
│  └──────────────────────────────────────────────────┘    │
└──────────────────────────────────────────────────────────┘
```

Specs:

- Status badges: color-coded pills (green = concluded, red = failed, yellow = in progress, purple = hypothesis)
- Failed experiments are celebrated, not hidden — this is a feature, not a bug
- Entries support MDX (code blocks, images, embedded demos)
- Filter bar: horizontal pill-based filter, sticky on scroll
- Each entry has a "Last updated" timestamp to show active thinking

---

9.10 — SHOWER THOUGHTS / HOT TAKES TICKER

Purpose: Quick-hit opinions and observations. Your Twitter feed, but on your own turf.

Design Options:

Option A: Marquee Ticker (Recommended for homepage) A horizontal scrolling ticker near the top of the page (below hero, above main content):

```
──────────────────────────────────────────────────────────────────────────────
"AI won't replace PMs, but PMs who use AI will replace those who don't"  •  "The best product is the one you almost didn't build"  •  "Hot take: wireframes are overrated"
──────────────────────────────────────────────────────────────────────────────
```

Option B: Card Grid (For dedicated /thoughts page)

```
┌──────────────────┐  ┌──────────────────┐  ┌──────────────────┐
| "The best PRD is |  | "Stop building   |  | "Unpopular take: |
|  a conversation, |  |  features.       |  |  most AI products |
|  not a document" |  |  Start solving   |  |  are just fancy   |
|                  |  |  problems."      |  |  search bars."    |
|  #product        |  |                  |  |                   |
|  Mar 2026        |  |  #philosophy     |  |  #AI #hottake     |
|                  |  |  Mar 2026        |  |  Feb 2026         |
└──────────────────┘  └──────────────────┘  └──────────────────┘
```

Specs:

- Ticker: CSS animation, pausable on hover, speed: 30-40px/s
- Card grid: masonry layout (varying heights), 3 columns desktop, 1 column mobile
- Each thought: quote-styled text, tag(s), date
- Accent serif font for the quote text (editorial feel)
- Max 280 characters per thought (Twitter-constraint for sharpness)

9.11 — THINGS I'VE CHANGED MY MIND ABOUT

Purpose: Intellectual honesty. Shows growth and the ability to update beliefs with new evidence.

Layout:

```
🔄 THINGS I'VE CHANGED MY MIND ABOUT

BEFORE:  "No-code tools are toys"
         ──────── → ────────
AFTER:   "No-code is the future of
          prototyping and MVPs"

WHY: "After seeing teams ship 10x faster
with Bubble and Retool, I realized the best
tool is the one that gets you to users first."

[Changed: Jan 2026]
```

Specs:

- Each card has a visual "Before → After" transition (could animate on scroll)
- "Before" text: struck-through or faded styling
- "After" text: bold, highlighted
- "Why" section: collapsible, shown on click/tap
- Arrow or transformation animation between before/after
- Keep to 3-5 entries (quality over quantity)

9.12 — PRINCIPLES I LIVE BY / PERSONAL MANIFESTO

Purpose: Your operating system. The rules and beliefs that guide how you work and live.

Design: Full-width section with a distinct visual treatment (darker background, editorial typography).

```
┌──────────────────────────────────────────────────────────────┐
│  ═══════════════════════════════════════════                  │
│  MY PRINCIPLES                                               │
│  "The operating system I run on"                             │
│  ═══════════════════════════════════════════                  │
│                                                              │
│  01  BUILD IN PUBLIC                                         │
│      "The best feedback comes from shipping, not planning."  │
│                                                              │
│  02  STRONG OPINIONS, WEAKLY HELD                            │
│      "Conviction to act, humility to change."                │
│                                                              │
│  03  USERS OVER FEATURES                                     │
│      "Every feature without a user need is technical debt."  │
│                                                              │
│  04  SIMPLICITY IS THE ULTIMATE SOPHISTICATION               │
│      "If you can't explain it simply, you don't understand   │
│       it well enough."                                       │
│                                                              │
│  05  FAIL FAST, LEARN FASTER                                 │
│      "Every failure is just a data point."                   │
│                                                              │
└──────────────────────────────────────────────────────────────┘
```

Specs:

- Numbered list with large numbers (display font, muted color)
- Principle title: bold, all-caps
- Explanation: serif accent font, italicized
- Entrance animation: each principle fades up in sequence (staggered scroll animation)
- Distinct background: slightly darker or textured section to set it apart
- 5-7 principles max

9.13 — PRODUCT PHILOSOPHY

Purpose: How you think about building products. Essential for AI/PM roles.

Layout: A dedicated mini-page or rich section with your frameworks.

Content Structure:

```
├── Opening Statement (your product worldview in 2-3 sentences)
├── Framework 1: How I Identify Problems
│   └── (visual diagram or flowchart)
├── Framework 2: How I Prioritize
│   └── (matrix, chart, or visual)
├── Framework 3: How I Measure Success
│   └── (metrics philosophy)
├── "Products I Admire & Why"
│   └── (3-4 products with your analysis)
└── Closing: "What I'm Still Figuring Out"
    └── (intellectual honesty — what you're learning)
```

Specs:

- Include actual visual frameworks (use SVG/diagrams, not just text)
- "Products I Admire" section: cards with product logos, your 2-3 sentence analysis
- The "Still Figuring Out" section is gold — shows humility and growth mindset
- Tone: authoritative but not preachy

9.14 — READING LIST / BOOKSHELF

Purpose: What shapes your thinking.

Layout: Visual bookshelf — 3D book spines or cover grid.

```
┌──────────────────────────────────────────────────────────────┐
│  📚 BOOKSHELF                                                 │
│  [Filter: All | Currently Reading | Favorites | AI | Product] │
│                                                               │
│  ┌──────┐ ┌──────┐ ┌──────┐ ┌──────┐ ┌──────┐ ┌──────┐      │
│  │      │ │      │ │      │ │      │ │      │ │      │      │
│  | Book | | Book | | Book | | Book | | Book | | Book |      │
│  |Cover | |Cover | |Cover | |Cover | |Cover | |Cover |      │
│  │      │ │      │ │      │ │      │ │      │ │      │      │
│  │      │ │      │ │      │ │      │ │      │ │      │      │
│  └──────┘ └──────┘ └──────┘ └──────┘ └──────┘ └──────┘      │
│  [Hover/click reveals: title, your 1-line review, rating]    │
└──────────────────────────────────────────────────────────────┘
```

Specs:

- Book covers: actual cover images, 2:3 aspect ratio
- Hover: card lifts, shows title + your 1-sentence review + star rating

- "Currently Reading" badge: a special tag on the book you're reading now
- Filter by category: tag-based filtering
- Optional: link to a longer review/notes page per book
- CSS 3D transform: subtle tilt on hover for a physical book feel

---

9.15 — THOUGHT LEADERSHIP WALL

Purpose: Longer-form opinions, mini-essays, and takes on AI/product/industry trends. The bridge between "shower thoughts" (short) and "blog posts" (long).

Format: 200-500 word mini-essays displayed as editorial cards.

Layout: Blog-style list or editorial masonry grid.

```
┌──────────────────────────────────────────────────────────┐
│  [Featured Post — Full Width]                            │

│  [Read →]                                                │
├──────────────────────────┬───────────────────────────────┤
│  [Post 2 — Half Width]   │  [Post 3 — Half Width]        │
│  "The Commoditization of │  "Metrics That Matter: Beyond │
│   AI and What It Means   │   Vanity Numbers"             │
│   for Product People"    │                               │
│  [Read →]                │  [Read →]                     │
└──────────────────────────┴───────────────────────────────┘
```

Specs:

- Featured post: full-width card, larger typography
- Regular posts: 2-column grid
- Reading time estimate
- Tags: color-coded
- Content stored as MDX, rendered with syntax highlighting and embedded components

---

9.16 — HOW I'D SOLVE IT (Weekly PM Challenge)

Purpose: A rotating real-world product problem with your AI-assisted breakdown. Shows PM thinking in action.

Concept: Every week (or bi-weekly), a new problem appears. You write a brief analysis. AI can help generate alternative approaches.

Layout:

```
┌──────────────────────────────────────────────────────────┐

9.17 — LIVE SENTIMENT JOURNAL

Purpose: Public, timestamped journal entries with AI-analyzed emotional themes.

Concept: You write short public journal entries (1-3 paragraphs). AI auto-tags each entry with emotions, themes, and connects them to related projects. Visitors see the emotional arc of your journey.

Layout:

```
📖 JOURNAL
[Sentiment Timeline — visual bar showing emotional arc]
Excited  Neutral  Focused  Excited

  Mar 20, 2026
  "Shipped the first version of my portfolio today.
   Feeling electric. There's something about putting
   yourself out there that's terrifying and thrilling."

  AI Tags: [😊 Excited] [🚀 Achievement] [🎨 Creative]
  Related: [Portfolio Project →]
```

Specs:

- Sentiment timeline: a horizontal visualization showing mood over time
- AI tags: auto-generated using Claude API on the server side when you publish an entry
- Color-coded by sentiment: warm colors = positive, cool = neutral, muted = reflective
- Entries: MDX content, reverse chronological
- Optional: connect entries to projects and Lab experiments

9.18 — PREDICT MY NEXT MOVE

Purpose: Forward-looking energy. AI-generated predictions based on your project patterns and stated interests.

Layout:

```
🔮 PREDICT MY NEXT MOVE
"Based on everything I've built, learned, and explored..."

┌──────────┐  ┌──────────┐  ┌──────────┐
│ 🎯 78%   │  │ 🎯 65%   │  │ 🎯 52%   │
│          │  │          │  │          │
│ "Will dive │ │ "Will ship │ │ "Will start│
│  deep into │ │  an AI   │  │  writing │
│  computer │ │  tool for │  │  weekly on │
│  vision  │  │  PMs by  │  │  Substack" │
│  next"   │  │  Q2 2026" │  │          │
└──────────┘  └──────────┘  └──────────┘

[Last updated: auto-generated weekly]
```

Specs:

- 3 prediction cards with "confidence" percentages (generated by AI, or manually set for fun)
- Updated periodically (weekly/monthly)
- Each prediction links to related projects/interests
- Fun, speculative tone — not overly serious
- Generated via Claude API analyzing your projects, Lab entries, and bookshelf

---

9.19 — CONTENT I LIKE / SNEAK PEEK

Purpose: Curated taste. What you consume, enjoy, and are inspired by.

Layout: Horizontal scrolling carousel or bento grid.

```
👀 CONTENT I LIKE

← [Article] [Podcast] [Video] [Tweet] [Tool] [Design] →

Each card: thumbnail + title + source + your 1-line take
```

Specs:

- Horizontal scroll with Embla Carousel, snap-to-card behavior

- Cards: image/thumbnail + title + source domain + your annotation
- Mix of content types (articles, videos, podcasts, tweets, tools)
- Updated regularly (acts like a public bookmark feed)
- Drag to scroll on both desktop and mobile

9.20 — AESTHETIC PHOTO GALLERY

Purpose: Visual personality. Show your world beyond code.

Layout: Masonry grid with lightbox.

Specs:

- Masonry grid: 3-4 columns (desktop), 2 columns (tablet), 1 column (mobile)
- Photos: travel, workspace, events, aesthetic shots, life moments
- Click to open in a lightbox with smooth zoom animation
- Optional: subtle caption that fades in on hover
- Images served via Cloudinary with automatic optimization
- Lazy loading with blur-hash placeholders
- No border-radius on photos (full-bleed, editorial feel) OR consistent 8px radius

---

9.21 — CONTACT & SOCIAL

Purpose: Make it dead easy to reach you.

Layout:

```
┌──────────────────────────────────────────────────────────┐
│  LET'S CONNECT                                           │
│  "I'm always up for a good conversation about AI, product,  │
│   or the meaning of life."                               │
│                                                          │
│  📧 [email@example.com]        — click to copy / open mail  │
│  📱 [+91 XXXXX XXXXX]         — click to copy            │
│  💼 [LinkedIn →]                                         │
│  📸 [Instagram →]                                        │
│  🐙 [GitHub →]                                           │
│                                                          │
│  [Or, drop a message ↓]                                  │
│  ┌──────────────────────────────────┐                    │
│  │  [Simple contact form:           │                    │
│  │   Name, Email, Message, Send]    │                    │
│  └──────────────────────────────────┘                    │
└──────────────────────────────────────────────────────────┘
```

Specs:

- Contact form: minimal, 3 fields max. Submit via Formspree, Resend, or API route
- Email: click to copy with "Copied!" toast animation
- Social icons: hover → brand color fill transition
- Section is the last thing before the footer
- Warm, inviting copy — not "Get in Touch" but something with personality

---

9.22 — AI CONNECTIONS MAP (Knowledge Graph)

Purpose: A visual, interactive map showing how your projects, skills, thoughts, and readings are interconnected. AI finds the non-obvious links.

Design: A force-directed graph (like a constellation map).

Specs:

- Library: react-force-graph-2d or D3 force simulation
- Nodes: represent projects, skills, books, thoughts, tools (color-coded by type)
- Edges: connections between them (e.g., "Python" connects to "AI Project" connects to "Book: Designing ML Systems")
- Interactive: click a node to see details, hover to highlight connections
- Generated from your content — AI maps the relationships
- Full-screen or large section with zoom/pan controls

- Beautiful: dark background, glowing nodes, animated edges
- This section should feel like a "map of your brain"

9.23 — "IF YOU HAVE 2/5/15 MINUTES" (Time-Based Layout)

Purpose: Respect the visitor's time. Let them self-select their depth.

Implementation: A floating widget or section near the top of the page.

```
┌──────────────────────────────────────────────────────────────┐
│  ⏱ HOW MUCH TIME DO YOU HAVE?                                │
│                                                              │
│  [⚡ 2 min — Speed Run]  [☕ 5 min — Highlights]  [🧠 15 min — Deep Dive]  │
└──────────────────────────────────────────────────────────────┘
```

Behavior:

- **2 min:** Shows only: Hero, Who Am I, Recent Achievement, Top 2 Projects, Contact. Everything else is collapsed/hidden.
- **5 min:** Adds: Skills, Education, Changelog, 1 Case Study, Fun Facts, Impact Dashboard.
- **15 min:** Full portfolio experience — everything visible including Lab, Moodboard, Letters, Unpopular Opinions, Decision Framework, Sentiment Journal, Knowledge Graph, and all hidden depths.
- Implementation: Zustand global state toggles section visibility. Sections animate in/out with Framer Motion `AnimatePresence`.
- Persist selection in session (Zustand + optional URL param like `?depth=deep`)
- This should be unobtrusive — a small floating pill, not a modal

---

9.24 — METRICS & IMPACT DASHBOARD

Purpose: Quantify your work. Recruiters love numbers. This section turns your accomplishments into a visual, scannable dashboard.

Layout:

```
📊 IMPACT IN NUMBERS

┌──────────┐ ┌──────────┐ ┌──────────┐ ┌──────────┐
│   12+    │ │  5,000+  │ │    8     │ │    3     │
│ Projects │ │ Users    │ │ Tools    │ │ Hackathon│
│ Shipped  │ │ Impacted │ │ Built    │ │ Wins     │
└──────────┘ └──────────┘ └──────────┘ └──────────┘

┌──────────────────────────────────────────────────┐
│  [Mini bar chart or sparkline showing growth over time]
│  — projects per quarter, skills acquired per year, etc.
└──────────────────────────────────────────────────┘
```

Specs:

- Top row: 4 large stat cards with animated counters (numbers count up on scroll into view using `useInView` + `animate` from Framer Motion)
- Counter animation: easing out, duration 1.5-2s, staggered by 150ms between cards
- Each stat card: large number (display font, bold), label below (muted text, small caps)
- Optional secondary row: mini-chart (sparkline or small bar chart using Recharts) showing trajectory
- Numbers should be honest and verifiable — don't inflate. Even small numbers are impressive if contextualized ("Built 3 AI tools used by 200+ students")
- Hover on a stat: tooltip showing which projects contributed to that number
- Background: subtle gradient or distinct card treatment to make numbers pop
- On mobile: 2x2 grid instead of 4 across

9.25 — OPEN SOURCE / COMMUNITY CONTRIBUTIONS

Purpose: Show you give back. Your work beyond personal projects — contributions to repos, communities, events, mentoring.

Layout:

```
🌐 COMMUNITY & OPEN SOURCE

[GitHub-Style Contribution Heatmap — 52 weeks]
Mon
Wed
Fri
[Less ▒▒▒ More]

🔧 [Repo/Project]
"Fixed X in Y"
[⭐ 12] [🍴 3]
[Link →]

🎤 [Talk/Workshop]
"Spoke at Z about"
[Attendees: 80+]
[Slides →]
```

Specs:

- Contribution heatmap: custom-built SVG grid (NOT a GitHub embed). Color: scale from var(--bg-tertiary) to var(--accent-primary) (signature yellow)
- Data source: pull from GitHub API at build time, or maintain manually in a JSON file
- Below the heatmap: cards for notable contributions — PRs merged, talks given, workshops led, communities moderated
- Each card: title, one-line description, impact metric, external link
- If you mentor or help others: include a "Mentoring" sub-section with testimonials or descriptions
- Keep it honest — even 1 meaningful PR or 1 community talk counts

---

9.26 — QR CODE FOR RESUME

Purpose: Bridging physical and digital. Scannable at career fairs, meetups, or printed on business cards.

Implementation:

- Generate a QR code that links to your portfolio (or directly to `/resume`)
- Display in the Resume section alongside the "Download PDF" button
- Also available in the Contact section

Specs:

```
┌──────────────────────────┐
│                          │
│  ┌──────────────┐        │
│  │              │ Scan to  │
│  │              │ view my  │
│  │              │ portfolio │
│  │              │          │
│  │              │ [Copy Link]│
│  └──────────────┘  [Download]│
└──────────────────────────┘
```

- Library: `qrcode.react` or generate SVG at build time
- Style the QR code to match your brand — use your signature yellow as the foreground color on dark background, or your dark color on light
- Add your logo/initials in the center of the QR code (with error correction level H to ensure scannability)
- Provide a "Download QR" button that saves it as PNG (useful for printing on business cards, stickers)
- The QR code URL should include UTM params (`?utm_source=qr&utm_medium=offline`) so you can track offline-to-online traffic in analytics

---

9.27 — SPOTIFY PLAYLIST EMBED

Purpose: Music taste is personality. A full playlist gives visitors a vibe check beyond the single "currently listening" track.

Layout:

```
🎧 MY SOUNDTRACK
"The playlist that powers my work sessions"

[Spotify Embed — Compact Player]
♫ Track 1 — Artist                    ▶ 3:42
♫ Track 2 — Artist                    ▶ 4:15
♫ Track 3 — Artist                    ▶ 2:58
...
[Open in Spotify →]

You could also have themed playlists:
[🧠 Deep Focus]  [⚡ High Energy]  [🌙 Late Night]
```

Specs:

- Use Spotify's oEmbed iframe: `https://open.spotify.com/embed/playlist/YOUR_ID`
- Set `theme=0` for dark mode compatibility
- Compact height: 352px for playlist view, 152px for single-track view
- Wrap in a styled container that matches your design system (border, border-radius: 12px, overflow: hidden)
- Optional: multiple playlists for different moods/contexts — display as toggleable tabs above the embed
- DO NOT autoplay. User-initiated only.
- On mobile: full-width, slightly reduced height
- Position: either in the About zone, or as a standalone section between heavier content sections (acts as a breathing room / palette cleanser)

9.28 — LETTERS TO MY FUTURE SELF

Purpose: Public ambition. Timestamped notes to your future self about goals, predictions, and bets. Visitors see your trajectory and conviction in real-time.

Layout:

```
📨 LETTERS TO FUTURE ME
"Things I want to remember, prove, or laugh about later"

  📅 March 2026                          [Open in: 2027]

  "Dear future me,

   Right now, I believe AI agents will fundamentally
   change how PMs work by 2027. I'm betting my career
   on this. If you're reading this and it happened —
   you were right to take the leap. If it didn't, I
   hope you learned something incredible along the way."

  Tags: [AI] [Career] [Prediction]
  Status: ⏳ Pending (opens Mar 2027)

  📅 January 2026                    [Status: ✅ Opened]

  "I promised myself I'd ship a portfolio by Q1 2026."

  VERDICT: ✅ Done! Shipped March 2026.
  Reflection: "Took longer than expected, but the result
  is better than I imagined."
```

Specs:

- Each letter: written in genuine first-person, addressed to future self
- Status system: ⏳ Pending (hasn't reached "open date" yet) | ✅ Opened (date passed, include a "Verdict" reflection) | ❌ Wrong (prediction didn't happen, include what you learned)
- Letters are sealed with an "open date" — adds suspense and narrative
- Opened letters include a reflection/verdict written after the date passed
- Chronological, newest at top
- Accent design: use an envelope/letter aesthetic — slightly different card style (maybe a subtle paper texture background, or a wax-seal icon)
- Content: MDX for rich formatting

- This section is INCREDIBLY powerful for showing long-term thinking and self-accountability

---

9.29 — THE MOODBOARD

Purpose: Visual identity beyond photos. A Pinterest-style collage of aesthetics, screenshots, designs, quotes, and textures that represent your taste and sensibility.

Layout:

```
┌──────────────────────────────────────────────────────────────┐
│  🎨 MOODBOARD                                                 │
│  "Things that live in my head rent-free"                      │
│                                                               │
│  ┌──────┐  ┌──────────────┐  ┌──────┐                        │
│  │ UI   │  │              │  │Quote │                        │
│  │screen│  │  Architecture│  │card  │                        │
│  │shot  │  │  photo       │  │      │                        │
│  ├──────┤  │              │  ├──────┤                        │
│  │Color │  ├──────────────┤  │Design│                        │
│  │palette│ │ Typography   │  │detail│                        │
│  │      │  │ specimen     │  │photo │                        │
│  ├──────┤  ├──────────────┤  ├──────┤                        │
│  │Texture│ │  Product     │  │Inspo │                        │
│  │      │  │  screenshot  │  │image │                        │
│  └──────┘  └──────────────┘  └──────┘                        │
└──────────────────────────────────────────────────────────────┘
```

Specs:

- Masonry grid layout (varying card heights for visual rhythm)
- Content types: screenshots of UI you admire, architecture photos, color palettes, typography specimens, design details, textures, quote cards, aesthetic photos, product screenshots
- Each item: image/visual + optional 1-line caption on hover
- No click-through necessary — this is a visual wall, not a link collection
- Optional: categorize with subtle colored dots (Design, Architecture, Nature, Type, Product)
- Lazy load all images with blur-hash placeholders
- Dense packing — minimal gaps, the grid should feel lush and full
- On mobile: 2-column masonry
- Update quarterly or whenever inspiration strikes
- This section should make a visitor think: "This person has *taste*"

9.30 — WHAT I'M CONSUMING (Live Feed)

Purpose: A real-time window into what you're watching, reading, listening to, and learning. Shows you're constantly evolving.

Layout:

```
┌──────────────────────────────────────────────────────────┐
│  👀 WHAT I'M INTO RIGHT NOW                              │
│                                                          │

│  [Last updated: Mar 27, 2026]                            │
└──────────────────────────────────────────────────────────┘
```

Specs:

- 4 categories: Reading, Watching, Listening, Learning — each with an icon
- Each item: title, source/author, progress indicator (if applicable)
- Progress bars: thin, using var(--accent-primary) fill
- Update manually via CMS/MDX or a simple JSON config file
- "Last updated" timestamp for credibility

- Design: compact, vertical stack. Each category is a mini-card or row.
- This section should feel effortless and casual — like glancing at someone's desk
- On mobile: stacks cleanly, no layout changes needed
- Optional enhancement: auto-pull from APIs (Goodreads RSS, Spotify recently played, YouTube watch history) — but manual is fine for v1

9.31 — UNPOPULAR OPINIONS

Purpose: Personality and conviction. Bold takes that show you think independently and aren't afraid to challenge consensus.

Layout:

```
┌──────────────────────────────────────────────────────────────┐
│  🔥 UNPOPULAR OPINIONS                                       │
│  "Agree or disagree — at least you'll remember me"           │
│                                                              │
│  ┌──────────────────────────────────────────────────────┐    │
│  │                                                      ||
│  │  "Most AI startups are just wrappers around an API   ||
│  │   call, and that's okay — distribution beats         ||
│  │   innovation 90% of the time."                       ||
│  │                                                      ||

│  │  "Wireframes are a waste of time. Go straight to     ||
│  │   high-fidelity prototypes and test with real users." ||
│  │                                                      ||
│  │  [🔥 Spicy Level: ▰▰▰▱ 3/5]        [#Product #Design] ||
│  └──────────────────────────────────────────────────────┘    │
│                                                              │
│  ┌──────────────────────────────────────────────────────┐    │
│  │                                                      ||
│  │  "College doesn't teach you how to build products.   ||
│  │   The internet does. But college teaches you how to  ||
│  │   think. Both matter."                               ||
│  │                                                      ||
│  │  [🔥 Spicy Level: ▰▰▱▱ 2/5]        [#Education #Life] ||
│  └──────────────────────────────────────────────────────┘    │
└──────────────────────────────────────────────────────────────┘
```

Specs:

- Each opinion: large quote-style text (accent serif font), with a "Spicy Level" meter (1-5 fire emojis or a custom heat bar using var(--accent-red) to var(--accent-primary))
- Spicy Level adds playfulness and self-awareness — you know which takes are hotter
- Tags for categorization
- Card design: slightly different from other sections — maybe a subtle red/orange tinted border or background to signal "hot takes zone"
- Keep each opinion to 1-3 sentences. Punchy and memorable.
- 5-8 opinions max. Rotate or add new ones over time.
- Entrance animation: cards "flame in" (fade up with a subtle warm glow pulse)
- On hover: the spicy meter animates/fills
- Distinct from "Shower Thoughts" — these are specifically contrarian or unconventional, while Shower Thoughts are broader observations

---

9.32 — MY DECISION FRAMEWORK

Purpose: How you make decisions — in work and life. Visualized, not just described. Shows structured thinking and self-awareness.

Layout:

```
🧭 HOW I MAKE DECISIONS
"My internal operating system, visualized"

[INTERACTIVE FLOWCHART / DECISION TREE]

START: "New opportunity or decision"
  │
  ▼
"Does it excite me at 2 AM?"
  ├── YES → "Does it align with where I'm headed?"
  │          ├── YES → "Will I learn something new?"
  │          │          ├── YES → ✅ GO FOR IT
  │          │          └── NO  → ⚠️ THINK HARDER
  │          └── NO  → "Is it a once-in-a-lifetime?"
  │                     ├── YES → ✅ LEAP OF FAITH
  │                     └── NO  → ❌ PASS
  └── NO  → ❌ EASY PASS

[Supporting text: 2-3 paragraphs explaining your
 decision-making philosophy in prose]

FRAMEWORKS I USE:
┌──────────┐ ┌──────────┐ ┌──────────┐
│ Regret   │ │ Eisenhower│ │ First    │
│ Minimi-  │ │ Matrix   │ │ Principles│
│ zation   │ │          │ │ Thinking │
└──────────┘ └──────────┘ └──────────┘
```

Specs:

- Primary visual: an interactive flowchart/decision tree built as SVG or React component
- Nodes are clickable — clicking reveals a tooltip with a real example from your life where this branch applied
- Below the flowchart: 2-3 paragraphs in prose explaining your philosophy
- "Frameworks I Use": 3-4 small cards, each naming a framework (Regret Minimization, Eisenhower Matrix, First Principles, etc.) with a 1-2 sentence description of how you apply it
- The flowchart should feel personal and slightly humorous ("Does it excite me at 2 AM?" is more memorable than "Does it align with strategic objectives?")

- Interactive: animate the flow path when hovering over a branch, highlight the path with var(--accent-primary)
- Build with SVG (custom) or a simple React component with conditional rendering
- On mobile: the flowchart simplifies to a vertical step-by-step list (decision tree collapses into sequential cards)

---

10. AI-POWERED FEATURES

Architecture

All AI features use Claude API via Next.js API routes (server-side). Never expose API keys client-side.

```
Client (React) → /api/ai/[feature] → Claude API → Response → Client
```

10.1 — AI-Annotated Resume

- **Implementation:** Annotations are pre-authored (not live-generated). Stored alongside resume content in MDX.
- **Why pre-authored:** Consistency, quality control, no latency, no API costs per visit.
- **Tooltip component:** Custom React component with Framer Motion enter/exit animations.

10.2 — AI Connections Map

- **Generation:** A build-time script that reads all your content (projects, skills, books, thoughts) and uses Claude to generate a JSON graph of relationships.
- **Output:** `connections.json` → consumed by the force-graph component.
- **Update frequency:** Regenerated on each deployment (or weekly via cron).

10.3 — Live Sentiment Journal

- **On publish:** When you add a journal entry, an API route sends the text to Claude for sentiment analysis.
- **Response:** Claude returns: primary emotion, secondary themes, related project slugs.
- **Storage:** Sentiment data stored alongside the journal entry in your DB/CMS.

10.4 — Predict My Next Move

- **Generation:** Weekly cron job or manual trigger. Sends your recent projects, Lab entries, bookshelf, and changelog to Claude with a prompt like: "Based on this person's work and

interests, predict 3 things they're likely to work on next. Be specific and creative."

- **Display:** 3 prediction cards with playful confidence percentages.

10.5 — How I'd Solve It

- **Your analysis:** Manually written by you.
- **AI enhancement:** Optionally, use Claude to generate "Alternative Approaches" or "Questions a Senior PM Would Ask" as supplementary content.

10.6 — AI-Powered Section Recommendations

- **Implementation:** Lightweight — based on scroll behavior and time spent, use simple client-side logic (not full AI) to surface "You might also like..." suggestions at the bottom of sections.
- **No tracking:** Privacy-first. All logic runs client-side, no data sent to servers.

---

11. EASTER EGGS & HIDDEN INTERACTIONS

11.1 — Terminal / CLI Mode

Trigger: Press ` three times quickly (or type "terminal" in the command palette) **Behavior:** The entire page transforms into a CLI interface.

```
┌──────────────────────────────────────────┐
│  > help                                  │
│                                          │
│  Available commands:                     │
│    about      — Who am I                 │
│    projects   — View my work             │
│    skills     — Technical skills         │
│    contact    — How to reach me          │
│    resume     — Download resume          │
│    secret     — ???                      │
│    thoughts   — Random hot take          │
│    exit       — Return to normal mode    │
│                                          │
│  > _                                     │
└──────────────────────────────────────────┘
```

- Monospace font (JetBrains Mono), green-on-black or amber-on-black theme
- Animated typing effect for responses
- Include fun hidden commands ("sudo hire me", "matrix", "coffee")

- Exit smoothly with transition back to normal view

11.2 — Konami Code Mini-Game

Trigger: ↑↑↓↓←→←→BA **Behavior:** Launches a simple mini-game (e.g., a quick Space Invaders clone, a type-racer with your hot takes, or a "catch falling skills" game)

- Built with canvas or simple DOM manipulation
- Score tracked in memory (session only)
- Dismissible with ESC

11.3 — Gravity Toggle

Trigger: Hidden button in the footer (or another secret location) **Behavior:** All elements on the current viewport "fall" with physics simulation (Matter.js or CSS).

- Elements tumble, bounce, and settle at the bottom
- A "Reset" button appears to restore the page
- Purely visual — doesn't break navigation

11.4 — Hidden /secret Page

Route: `/secret` **Content:** A raw, unfiltered page with:

- "The unpolished version of me"
- Real talk about failures, struggles, imposter syndrome
- Unpopular opinions you didn't put on the main site
- Maybe a playlist of songs that define you
- Easter egg acknowledgment ("You found the secret page. You're my kind of person.")
- Design: stripped back — minimal styling, raw typography, feels intentionally lo-fi

11.5 — Console.log Messages

Implementation: Custom console messages for developers who open DevTools.

```javascript
console.log('%c👋 Hey, fellow developer!', 'font-size: 20px; font-weight: bold;');
console.log('%c I see you\'re poking around. Respect.', 'font-size: 14px;');
console.log('%c🦎 Found a bug? Let me know: email@example.com', 'font-size: 12px; co
console.log('%c                                        ', 'background: url(YOUR_ASCII
```

- Include ASCII art of your name or a fun graphic

- Hidden messages, links, or jokes in the console
- Maybe a secret code that unlocks something on the site

11.6 — 404 Page Mini-Game

Route: Any invalid URL **Design:** A fun, themed 404 page:

- "You're lost. But that's okay — I get lost in my own thoughts too."
- A simple puzzle or mini-game (maze, word search with your skills, memory card game)
- Navigation links to get back on track
- Consistent with site design but with a playful twist
- Score or time tracked, with a "brag" button that copies a shareable message

11.7 — Speed Reader Detection

Trigger: If user scrolls through 3+ sections in under 10 seconds **Behavior:** A toast notification slides in:

- "Woah, slow down! The good stuff is in the details 👀"
- Dismisses in 3 seconds or on click
- Only triggers once per session
- Light, humorous — never annoying

---

12. RESPONSIVE DESIGN & MOBILE

Breakpoints

```
Mobile:    < 640px    (sm)
Tablet:    640-1024px (md)
Desktop:   1024-1440px (lg)
Wide:      > 1440px   (xl)
```

Mobile-Specific Rules

- 3D hero: reduce geometry complexity or fallback to animated gradient
- Navigation: hamburger → full-screen overlay
- Project grid: single column
- Bento grids: stack vertically
- Carousels: swipe-enabled
- Touch targets: minimum 44x44px

- Font sizes: scale down proportionally (but body never below 15px)
- Hide decorative animations (parallax, cursor trails) on mobile
- Sticky elements: only the nav bar. No other sticky elements on mobile.
- Time-based layout selector: bottom sheet instead of floating pill
- Easter eggs: adjust triggers for touch (long-press instead of keyboard shortcuts)

---

13. PERFORMANCE & OPTIMIZATION

Targets

```
Lighthouse Score:    95+ (all categories)
First Contentful Paint: < 1.2s
Largest Contentful Paint: < 2.5s
Time to Interactive: < 3.5s
Cumulative Layout Shift: < 0.1
Bundle Size (JS):   < 200KB (initial load)
```

Strategies

- **3D Lazy Loading:** Three.js canvas loads after initial paint, behind a `<Suspense>` boundary with a gradient placeholder
- **Image Optimization:** Next.js `<Image>` component everywhere, WebP/AVIF format, responsive sizes
- **Code Splitting:** Dynamic imports for heavy sections (Lab, Knowledge Graph, Terminal Mode)
- **Font Optimization:** `next/font` with `display: swap`, subset to used characters
- **Prefetching:** Prefetch visible links, preload critical fonts and hero assets
- **Static Generation:** SSG for all content pages (MDX), ISR for dynamic content (journal, changelog)
- **CDN:** Vercel Edge Network for global distribution
- **Animation Performance:** Use `will-change` sparingly, prefer `transform` and `opacity`, use `requestAnimationFrame` for JS animations

---

14. SEO & META

Per-Page Meta

```
Title:        "[Your Name] — AI Product Builder & Thinker"
Description:  Dynamic per page (max 155 chars)
OG Image:     Custom designed OG image per major section (1200x630)
OG Type:      website (homepage), article (blog/thoughts)
Twitter Card: summary_large_image
Canonical:    Self-referencing
Favicon:      Custom designed (SVG + PNG fallbacks)
```

Structured Data

- Person schema (JSON-LD) on homepage
- Article schema on blog/thought posts
- BreadcrumbList on nested pages

Sitemap & Robots

- Auto-generated sitemap.xml via next-sitemap
- robots.txt: allow all (it's a public portfolio)

---

15. ACCESSIBILITY

Requirements (WCAG 2.1 AA)

- **Color Contrast:** All text meets 4.5:1 ratio (7:1 for small text in dark mode). Test the yellow accent especially.
- **Keyboard Navigation:** Every interactive element is focusable and operable via keyboard. Focus styles: 2px solid var(--accent-primary) outline.
- **Screen Reader:** Semantic HTML (proper heading hierarchy, landmarks, aria-labels on icons). All images have alt text.
- **Reduced Motion:** Wrap ALL animations in `prefers-reduced-motion` media query. Provide a motion-free experience.
- **Focus Trap:** Modals and overlays trap focus. ESC closes them.
- **Skip Navigation:** "Skip to main content" link (visually hidden, visible on focus).
- **Link Purpose:** All links have descriptive text (no "click here").
- **Form Labels:** All form inputs have visible, associated labels.

- **Touch Targets:** 44x44px minimum.

---

16. DO'S AND DON'TS

✅ DO

- **DO** make every section earn its place. If it doesn't add value, cut it.
- **DO** write in your own voice. This portfolio should sound like YOU, not a template.
- **DO** show process and thinking, not just outcomes.
- **DO** celebrate failures in The Lab. They're proof you're trying.
- **DO** keep the design system consistent. Every color, spacing, and animation should come from the defined system.
- **DO** test on real devices. Especially mobile.
- **DO** make the 3D hero beautiful but performant. It's the first impression.
- **DO** update content regularly. A stale portfolio is worse than no portfolio.
- **DO** use real content from day one. No "Lorem ipsum" anywhere.
- **DO** make loading states delightful (skeleton screens, subtle animations).
- **DO** make the site feel fast. Perceived performance matters as much as actual performance.
- **DO** include a "Download Resume" button that's easy to find.
- **DO** add subtle hover states to everything clickable.
- **DO** use the signature yellow strategically — it should always feel special.

❌ DON'T

- **DON'T** use stock photos. Every image should be yours or custom-made.
- **DON'T** use generic copy ("Passionate developer...", "Innovative thinker..."). Be specific.
- **DON'T** over-animate. If everything moves, nothing stands out.
- **DON'T** use more than 3 font families total.
- **DON'T** make sections too long. If someone has to scroll more than 3 viewports in one section, it's too long.
- **DON'T** use rainbow gradients, neon colors, or clashing palettes.
- **DON'T** make the navigation confusing. 5-6 top-level nav items max.
- **DON'T** forget dark/light mode in any section. Test BOTH thoroughly.
- **DON'T** put autoplay audio or video. Always user-initiated.
- **DON'T** use modals excessively. One modal is fine. Three is too many.
- **DON'T** make easter eggs frustrating. They should be delightful, not annoying.

- **DON'T** forget mobile. Half your visitors will be on their phones.
- **DON'T** use cookie banners or popups. Keep the experience clean.
- **DON'T** make the contact form require 10 fields. Name, email, message — that's it.
- **DON'T** hardcode content. Use MDX or a CMS for easy updates.
- **DON'T** skip the OG image. It's how your site looks when shared on social.
- **DON'T** use `alert()` or `confirm()` for anything. Ever.
- **DON'T** build a generic portfolio that looks like it came from a Dribbble trend. This is YOUR digital identity. Make it weird. Make it you.

---

17. DEPLOYMENT & INFRASTRUCTURE

Recommended Pipeline

```
Local Dev:     Next.js dev server (npm run dev)
Version Control: GitHub (private repo)
CI/CD:         Vercel (auto-deploy on push to main)
Preview:       Vercel preview deployments for PRs
Production:    Vercel production (custom domain)
Environment:   .env.local for API keys (Claude API, Spotify API, etc.)
```

Environment Variables

```
ANTHROPIC_API_KEY=sk-ant-...        # Claude API for AI features
SPOTIFY_CLIENT_ID=...               # Spotify integration
SPOTIFY_CLIENT_SECRET=...
SPOTIFY_REFRESH_TOKEN=...
NEXT_PUBLIC_SITE_URL=...            # Your domain
DATABASE_URL=...                    # Supabase/PlanetScale connection
FORMSPREE_ENDPOINT=...              # Contact form
```

Database (Supabase)

Tables needed:

```
journal_entries:   id, content, sentiment_tags, created_at
changelog_entries: id, content, tags, created_at
predictions:       id, prediction, confidence, generated_at
guestbook:         id, name, message, created_at (if implemented)
```

---

18. CONTENT STRATEGY & COPY GUIDELINES

Voice & Tone

- **Confident, not arrogant:** "I built this" not "I'm the best at this"
- **Honest, not self-deprecating:** "I'm still learning" not "I'm terrible at this"
- **Warm, not corporate:** "Let's chat" not "Schedule a consultation"
- **Specific, not generic:** "I shipped an AI tool that reduced PM research time by 60%" not "I'm passionate about AI"
- **Forward-looking:** Always hint at what's next, what you're exploring, where you're headed

Section Naming

Avoid generic section titles. Instead:

```
❌ "About Me"          → ✅ "The Human Behind the Code"
❌ "My Projects"       → ✅ "Things I've Built"
❌ "Skills"            → ✅ "My Toolkit"
❌ "Blog"              → ✅ "Thought Leadership Wall" or "Mind Feed"
❌ "Contact"           → ✅ "Let's Build Something"
```

Content Update Cadence

```
Weekly:     Changelog, Shower Thoughts, Content I Like, What I'm Consuming
Bi-weekly:  How I'd Solve It, Journal entries, Unpopular Opinions
Monthly:    Bookshelf updates, Lab entries, Predictions refresh, Moodboard
additions, Letters to Future Self
Quarterly:  Project additions, Resume updates, Principles review, Impact Dashboard
refresh, Decision Framework review, Open Source/Contributions update
```

FINAL NOTE

This portfolio is not a weekend project. It's a living product — your most personal product. Build it iteratively:

Phase 1 (Week 1-2): Core structure, hero, nav, projects, about, contact, resume, QR code **Phase 2 (Week 3-4):** Skills, education, changelog, achievement box, dark/light mode, impact dashboard, open source contributions **Phase 3 (Week 5-6):** The Lab, thoughts, principles, reading list, photo gallery, Spotify playlist, what I'm consuming **Phase 4 (Week 7-8):** AI features (annotations, sentiment, connections map, predictions), moodboard, letters to future self **Phase 5 (Week 9-10):** Unpopular opinions, decision framework, thought leadership wall, how I'd solve it, product

philosophy **Phase 6 (Week 11-12):** Easter eggs, terminal mode, 404 game, console messages, speed reader detection, polish, testing **Phase 7 (Ongoing):** Content, iteration, updates, new ideas

Ship Phase 1 fast. Then iterate in public. That itself tells a story.

End of Specification. Now go build something the internet hasn't seen before. 🚀
